

EAR To EAR

Summary of the lesson

- 1) Different animals have different kinds of ears.**
- 2) Some animals have ears that you can see while in some animals you can not see their ears.**
- 3) Birds have tiny holes on both sides of their heads that help them to hear. These holes generally covered with feathers.**
- 4) The tiny holes on a lizard's head are it's ears.**
- 5) Different animals have different types of skin.**

- 6) The different patterns on an animal's body are due to the hair on the skin.
- 7) Animals whose ears you can see have hair on their body. These animals give birth to their young ones. Example- cat,goat,cow, camel, elephant,tiger etc.
- 8) Animals that do not have ears on the outer side and have no hair on their body,lay eggs. Example- lizard,crow,duck,snake,fish etc.
- 9) Dinosaurs lived on earth many many years ago. They are extinct now.
- 10) We can recognise animals by their ears and skin.
